

**Quality Solutions for Any Problem Water**

## ***Automatic Backwash Filter Systems***

**AvantaPure offers a number of backwash filters that utilize different medias that can correct problems arising from objectionable tastes, odors, sediment, stains, corrosion, excess chlorine and contamination. Using the same technology as the AvantaPure conditioning system, our filter systems can handle most water concerns. Atlas can custom design residential backwash filter systems from 7gpm to 30 gpm.**

**AvantaPure Automatic Filters are a silent sentry**

**AvantaPure™ Automatic Filters are a silent sentry on duty 24 hours a day. These units stop sediment, rust, acid, odors and unpleasant tastes, and backwash automatically to get rid of undesirable contaminants. In most cases, you don't have to change filter cartridges or remember to initiate any activity.**

### **State-of-the-art systems**

**These state-of-the-art systems are quality manufactured and designed to treat most any water problem you may have. The system's sophisticated microprocessor allows us to install and program the system for your exact water conditions. Once installed, the ease of operation and superior design of these filter systems assure their efficiency and low user maintenance. Some systems will require a regenerant to maintain quality water while other systems require only simple backwashing on a regular basis. Installed with an AvantaPure conditioner, the AvantaPure Filter systems will provide your family with the best possible water, in the most efficient and cost saving system possible.**
